Jennison Manufacturing Group Receives American Petroleum Institute Certification

New Designation Positions Company to Better Serve Emerging Local Oil and Gas Industry

PITTSBURGH, Feb. 20, 2013 – Jennison Manufacturing Group is proud to announce that it received final audit approval and obtained its American Petroleum Institute (API) certification. Obtaining this certification positions Jennison to provide high-quality machined parts for the growing oil and gas industry.

API is the only national trade association that represents all segments of America's technology-driven oil and natural gas industry. The increased global and competitive demands of the oil and natural gas industry have created new measures by which organizations must demonstrate their capabilities, and receiving API Certification allows organizations to prove that they can consistently meet industry standards such as the inspection, repair, replacement parts and maintenance of process equipment; and customer requirements, while providing a continued high level of safety.

"Receiving the API certifications is a giant step forward for our manufacturing facility," commented Tom Jennison, President of Jennison Manufacturing Group. "We are delighted that Jennison can now bring its trusted manufacturing services to the evolving oil and gas industry here in Western Pennsylvania."

The audit was performed at Jennison's headquarters and API auditors verified conformance with API SPEC Q1, ISO/TS 29001, ISO 9001:2008. As a result, Jennison Precision Machine Inc. and Jennison Corporation received the following certifications from API:

- APIQR REGISTRATION NO. Q1-1344 FOR API SPEC Q1
- APIQR REGISTRATION NO. TS-1236 FOR ISO/TS 29001
- APIQR REGISTRATION NO. 1524 FOR ISO 9001:2008

API Certification is part of Jennison's continued effort to support clients in simplifying challenging projects with efficient and beneficial solutions.
